## Brief Review of Oakland University Feasibility Studies

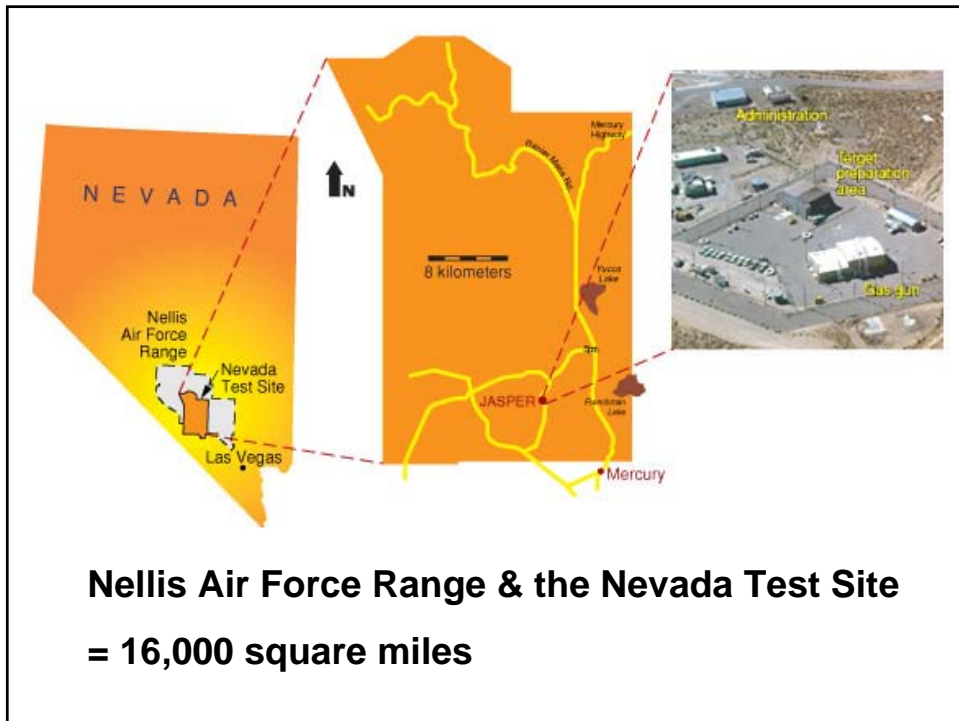

## Calculation of Solar Panle Area Required to Meet 2002 US Electrical Energy Consumption

Annual electrical energy required =	1.25E+19 Joules / yr
=	3.47E+12 kW hr / yr
Average POWER of full sun at solar panel =	1,000 W / m <sup>2</sup>
=	1.0 kW / m <sup>2</sup>
Average capacity factor	20%
Hours per year	8,760 hours / yr
Average solar ENERGY available to solar panel =	1752 kW hr / m <sup>2</sup> / yr
=	4.8 kW hr / m <sup>2</sup> / day
Estimated average PV total system efficiency =	10%
Estimated average system losses =	15%
Estimated electrical energy output =	148.92 kW hr / m <sup>2</sup> / yr
=	0.408 kW hr / m <sup>2</sup> / day
Area required	2.33E+10 m <sup>2</sup>
Area required	2.51E+11 ft <sup>2</sup>
Area required	5,761,310 acres
<b>Area required</b>	<b>9,002 miles<sup>2</sup></b>
	<b>~ Vermont</b>

**Photosynthesis:** Nature's way to convert sunlight, CO<sub>2</sub>, water and nutrients into chemical energy

**BioMass**

**Photosynthesis:**

... nature's battery stores solar energy in chemical bonds of glucose.

**Reverse of photosynthesis:**

... also called combustion, oxidation, biodegradation  
...chemical bonds in glucose are broken

***A Brief Review of  
Oakland University  
Feasibility Studies***

# Wind Power Option

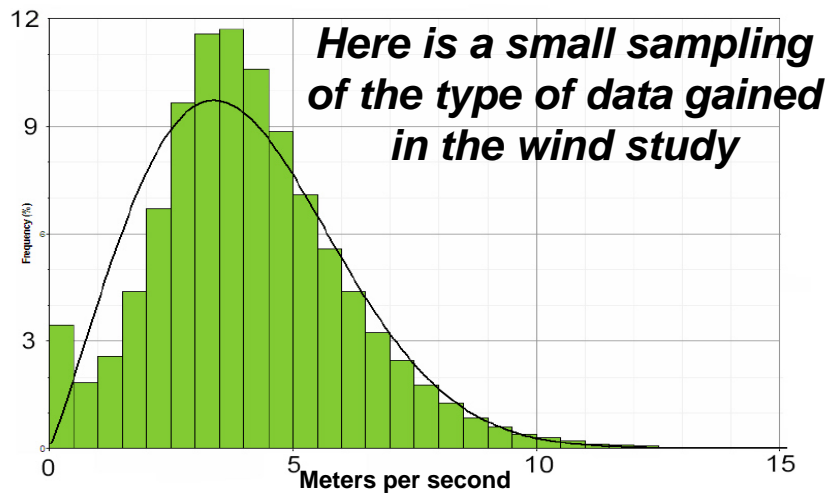

for Oakland University

## **There were two parts of the study**

- **Wind Speed Study Results**
  - Wind speed was recorded for two years at a 50 meter tall “met tower” located on the south side of the main campus
  - Data collected for 2006 & 2007
- **Feasibility Study Results**
  - This data was then used in a full engineering and cost analysis for one or more wind turbines for the Oakland campus

### Average Wind Data Results

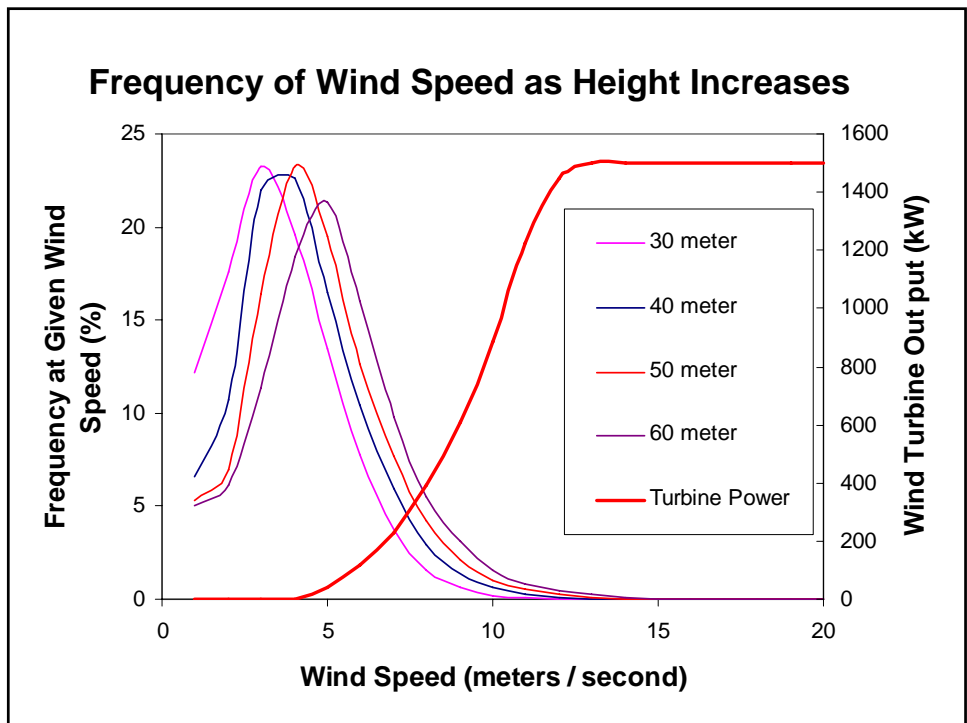

<u>Height</u>	<u>Wind Speed</u>	<u>Method</u>
30 m	3.0 m/s	measured
40 m	3.6 m/s	measured
50 m	4.1 m/s	measured
75 m	5.2 m/s	calculated
80 m	5.4 m/s	calculated
100 m	6.2 m/s	calculated

**Wind Speed Frequency Distribution at 50 Meters  
(percent time for each wind speed)**

**Here is a  
typical wind  
turbine under  
consideration**

1,500 kW each

77 meter blade  
diameter

100 meter tower

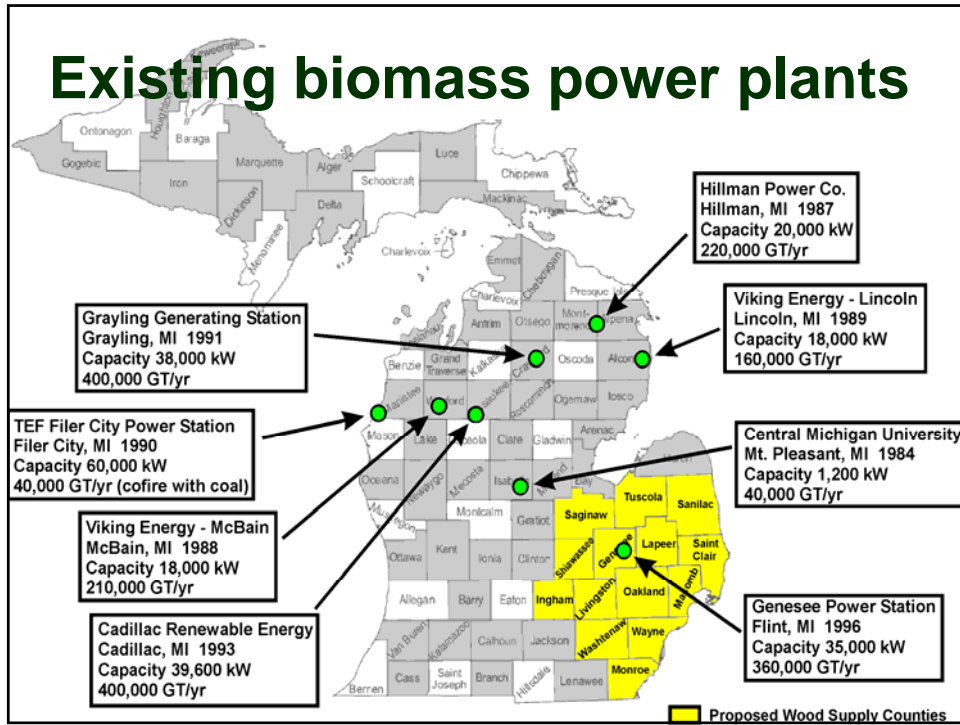

- Wood supply
- Campus growth & future needs
- Wood boilers
- Proposed sites
- Costs & savings

**We looked at 14 counties in SE Michigan & found 1.7 million tons of urban waste wood per year**

# Existing biomass power plants

**Nearby wood recyclers could easily serve the new system**

*J.h.* **Hart**   
*urban*  
**FORESTRY**

## Other campuses heat with wood

- Central Michigan University
- Northern Michigan University is developing a plant

## **CMU Wood Boiler Plant**

**(heats  
most of  
campus)**

*(note: only water vapor  
is coming from stack)  
photo - Jim Leidel 2005*

**Next we look at  
the future needs  
for campus:**

- 1. Replace aging  
boilers**
- 2. More capacity  
for future growth**

## ***Existing Central Heating Plant***

<b>Unit</b>	<b>Capacity (MMBTU/hr)</b>	<b>Year Installed</b>	<b>Age in years / Condition</b>
B-1	100	1969	39 / good
B-2	100	1969	39 / good
B-3	34	1959	49 / fair
B-4	32	1957	51 / marginal
<b>Total</b>	<b>265</b>		

**Oakland University Ten Year Fall Enrollment Growth with 2020 Vision**

**We then looked  
at various wood  
boiler systems**

***Three  
Proposed  
Site  
Locations***

***Artist's Renderings***

***A new wood storage building  
(in Kingsville, Ontario) 80 MMBTU/hr***

**Annual operating savings are in the range of \$1.5 million**

## Operating Cost Estimates

#### OU's Investigations into Wind Power

Oakland University will be investigating local wind power resources on campus with the installation of a 50 meter tall, wind sensor tower. It will be located several hundred yards south of Pioneer Drive, near Squirrel Road. Please visit [Alternative Energy Solutions](#) web site for more information and a [press release](#).

Also, for information on wind power in Michigan and elsewhere, [click here...](#)

#### University Energy Usage & Cost

Take a look at the historical usage and cost of the west campus utilities over the past decade. **About \$275 is spent each year per Full Year Equivalent Student.** This equates to 5 to 6% of a full time student's tuition. (based on 16 credit hours for two semesters) [more info...](#)

#### University Energy Purchasing

[Click here](#) to learn more on how Oakland University spends its \$5 million dollars each year to heat, cool, and power our fine institution.

#### OU Photovoltaic - Solar Electric Roof

OU was recently installed a 10KW photovoltaic demonstration project on the roof of the student apartment Community Building. The produced electricity from 500 Uni-Solar PV shingles and is tied directly to the University electrical grid.
